PHP operator exercises

1. Write a PHP script to see if the specified year is a leap year or not

2. Write a PHP script to check the season depending on set temperature if the temperature is below 20 we are in winter otherwise the season is summer.

3. Write a PHP script to calculate the sum of the two mapped integers. If the two values are the same, then three times their sum is returned.

4. Write a PHP script to get the absolute difference between n and 100. If n is greater than 100, return triple the absolute difference.

5. Write PHP script to check two integers, and return true if one is 30 or if their sum is 30.

6. Write a PHP script to check an integer and return an integer if it is within 10 of 100 or 200.

7. Write in PHP script to check if the given positive number is a multiple of 3 or a multiple of 7

8. Write a PHP script to create a new string where "if" is added to the front of a particular string. If the series really begins with "if," then return the string unchanged.

9. Write a PHP script to remove the character in a specific position from a specific string. The position selected in range 0..1 string length inclusive

10. Write PHP script to check two integers if either is in the range 100..200 inclusive.

11. Write a PHP script to check if two valid values are in the range of 20.50 inclusive. Returns true if 1 or another in the listed range is false.

12. Write PHP script to check for the largest number among three integers

13. Write in PHP script to check the number closest to 100 between two integers.

    Return 0 if the two numbers are equal

14. Write a PHP script that accepts two integers and returns an integer if one of them

    is 5, their sum, or difference between them is 5.
